                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14.2 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The CDNAs were ligated to Lone-linker Li-Sal4, purified by phonol-chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using EX Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.4 kb. The library was constructed by Yulan Piao (NIA).
                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="Vector: pSPORTI (Invitrogen); Site_1: SalI; Site_2: Not!; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), intramural Research Program, NIH (http://lgsun grc.nia.nih.gov/cDNA).This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 1154199]). Total RNAS were obtained from Dr. Kenneth R. Boheler (National Institute on Aging, USA). Es Cells were cultured without feeder cells in the presence of LIF and BRL-conditioned media. Double-stranded cDNAS were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 (bases 1 to 466)
Takasuga, A. Hirotsune, S., Itoh, R., Jitohzono, A., Suzuki, H., Aso, H. and Sugimoto, Y. Hirotsune, S., Itoh, R., Jitohzono, A., Suzuki, H., Aso, H. Establishment of a high throughput EST sequencing system using poly(A) tail-removed cDNA libraries and determination of 36,000. bovine ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EST 27-NOV-2001

Pred. to. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The present invention describes an improvement to a method requiring the administration of interferon alpha (IFN-alpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonuclectides with phosphorothicate backbones, palindromes, or G-rich sequences. The sequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonuclectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Immunostimulatory nucleic acid; ISNA; human; interferon alpha; IFN-alpha; viral infection; phosphorothioate backbone; palindrome; cancer; ds.

                                                                                                                                                                                                                                                                 The present invention describes an improvement to a method requiring the administration of interferon alpha (IFN-alpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number such nucleic acids are also provided. These may comprise oligonucleotides with phosphorothicate backbones, palindromes, or Grich sequences. The sequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide.

Many and have been found to stimulate the innate immune system. Natural Miler and T cells are activated by exposure to oligonucleotides containing CpG motifis. Oligonucleotides containing CpG motifis. Oligonucleotides containing CpG motifis can be used as adjuvants in vaccines. The present invention relates to a CpG receptor family are associated with responses to a CpG receptor family are associated with responses to pathogens. CpG receptor family are associated with responses. The CpG receptor or cells expressing the receptor are useful for identifying a compound which binds to or modulaters an activity of the CpG receptor. The compounds are useful in e.g. vaccine adjuvants promoting cell-mediated immune responses, antibacterials, (e.g. protection from listeria infection, tumour immunotherapy, allergy treatment, (e.g. suppressing IgE in human PBMC, shifting from Th2 to Th1) and as anti-inflammatory agents (e.g. for use in cystic fibrosis, sepsis, heart disease, chlamydia, inflammatory bowel disease, arthritis and multiple sclerosis). The present sequence represents a CpG motif containing oligonucleotide used in examples demonstrating that CpG oligonucleotides

The sequences of a number of such nucleic acids are also provided. These may comprise oligonucleotides with phosphorothioate backbones, palindromes, or G-rich sequences. The agequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                       Improving the efficacy of treatments involving the administration of interferon-alpha by co-administering an isolated immunostimulatory

Synthetic.

Immune response, modulating related oligonucleotide SEQ ID NO:90.

22-AUG-2001 (first entry)

```
AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences.

Cr he ODN are useful for inducing an immune response, preferably a cell-cap admin production or a humoral immune response involving B cell activation, interferon a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma.

CC treating, preventing or ameliorating an allergic reaction, e.g. asthma.

CC treating, preventing or ameliorating an allergic reaction, e.g. asthma.

CC treating or autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The cost of induction of immune response improves the efficacy of a vaccine and is induction of immune response improves the efficacy of a vaccine and is another atopic conditions, for inducting eccama, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines cap and other atopic conditions, for improving the efficacy of vaccines cap and other and diseases such as rheumatoid artititis and completely predictions including Francisella, schistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and contract and instance agent, including Francisella, schistosomiasis, attential and instance of bio-warfare agent, including Ebola, attential and instance of bio-warfare agent, including Ebola, attential and and allergies and autoin and allergies and allergies and autoin and allergies and aut

The methods are useful for inducing IL-6, interferon-gamma or IL-12, or stimulating natural killer cell lytic activity in a subject, particularly a human. The methods are particularly useful for modulating an immune response. AAH50571 to AAH50671 represent oligonucleotide sequences used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (IL-6), interferon-gamma (IFN-gamma) or IL-12, or for stimulating natural killer cell lytic activity. The methods comprise administering to the subject or exposing a natural killer cell to an immunostimulatory nucleic acid. Also described are: (1) inducing IL-6 in a subject comprising administering to the subject to induce IL-6 in the subject the immunostimulatory nucleic acid; (2) stimulating natural killer cell lytic activity comprising exposing a natural killer cell to the immunostimulatory nucleic acid to stimulate natural killer cell lytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes methods for inducing interleukin 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 16.8; DB 22;

AAV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method involves determining the CpG-N and CpG-S motifs present in the construct, removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct and enving enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors,
                                                                                                                                                                                                                                                                                                                                                         Use of neutralising CpG and stimulating CpG motifs in DNA vectors for enhancing the immunostimulatory effect of an antigen or enhancing the expression of a therapeutic polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 20 BP; 3 A; 2 C; 12 G; 3 T; 0 other;

```
The invention fracters to a mittation of the computation (mittation) with an adsorbent surface, and which comprises a metabolisable oil and an computation detergent). It also relates to a composition comprising the micropanticle with an adsorbent surface, where the micropanticle comprises a polymer selected from a coly(alpha-hydroxy acid), a polyhydroxy butyric acid, a polycaprolactone, a polyorthoester, a polyanhydride, and a a polycapitally active macromolecules such as DNA, polypeptides, antigens, hormones, pharmaceuticals, enzymes, as DNA, polypeptides, antigens, hormones, pharmaceuticals, enzymes, adjuvants. Additionally, a second biologically active molecule may be encapsulated within the microparticle. The microcomision can be used in methods of inmunising a host animal, particularly a human, against a viral, bacterial or parasitic infection, and in methods of increasing a containment of the particularly used as vaccines for hepatitis c virus adsorbed) may be particularly used as vaccines for hepatitis c virus (HVV), hepatitis B virus (HVV), herpes simplex virus (HVV), human immunodeficiency virus (HVV), cytomegalovirus (GWV), influenza virus, and rabics virus; the bacteria which canse cholera, diphtheria, tetanus and pertussis: Helicobacter pylori and Haemphilus of particular, and the paper proper of the man and the particular of the particular of the paper of the paper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             malaria-causing parasites. Sequences AAA90447-A90467 represent Th1 lymphocyte stimulating oligonucleotides containing at least one CpG motif which are claimed for use as adjuvants in the compositions of the

CpG-N motif S-ODN 1628 DNA

```
ANV27641-751 represent immunostimulatory oligodecxyribonucleotides (ODMs) of the invention. The ODNs contain at least one unmethylated CpG dinucleotide, and have the formula:

5 'NIXIGGX2NZ 3', where at least one nucleotide separates consecutive CpGs, X1 is adenine, guanine, or thymine, X2 is cytosine or thymine, N is any nucleotide and N1+N2 is 0.26 bases with the provision that N1 and N2 does not contain a CGGG tetramer or more than one CGG or CGG trimer.

5 'NIXIZCGX3X4N 3', where at least one nucleotide separates.

5 'NIXIZCGX3X4N 3', where at least one nucleotide separates.

5 'NIXIZCGX3X4N 3', where at least one nucleotide separates.

5 'NIXIZCGX3X4N 3', where at least one concleted separates.

5 'NIXIZCGX3X4N 3', where at least one nucleotide separates.

5 'NIXIZCGX3X4N 3', where at least one nucleotide separates.

5 'NIXIZCGX3X4N 3', where at least on concletide and N1+N2 is consecutive CpGs, X1 and X2 are selected from TPT or CpT, N is any nucleotide and N1+N2 is consecutive CpGs, X1 and X2 are selected from TPT or CpT, N is any nucleotide and N1+N2 is consecutive CpGs rimer.

5 'NIXIZCGX3X4N 3', where at least or for a subject of a subject sin a subject and redirect a subject.

5 'Immune response from a Th2 to a Th1 (e.g. by inducing monocytic cells of an other cells to produce Th1 cytokines, including IL-12, IFN gamma and GM-CSP). The ODNs can be used to treat or prevent an asthmatic disorder, adjuvant during antibody generation in a mammal such as a mouse or a human.
                                                                                                                       unmethylated CpG dinucleotide; activate; lymphocyte; immune response; Th2; Th1; cytokine; treatment; prevention; asthma; autoimmune disease; desensitisation therapy; artificial adjuvant; antibody generation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                           New immunostimulatory nucleic acid molecules - which contain at least one unmethylated CpG dinucleotide, used for treating e.g. tumours, infections or autoimmune disease
                                                                            Immunostimulatory oligodeoxyribonucleotide of the invention
                                                                                                           Immunostimulatory; oligodeoxyribonucleotide; ODN;

ANV74237-V74253 are oligodeoxynucleotide (ODN) primers used to describe a method for enhancing the immunostimulatory effect of an antigen encoded by nucleic acid contained in a nucleic acid construct. The method involves determining the CpG-N and CpG-S motifs present in the construct, removing neutralising CpG (CpG-N) motifs and optionally inserting stimulatory CpG (CpG-S) motifs in the construct, thereby producing a nucleic acid construct having enhanced immunostimulatory efficacy. The method can be used for immunisation against viral antigens, e.g. from hepatitis B virus (HBV), bacterial antigens or an antigen derived from a parasite. They can also be used for expression of a therapeutic polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines, apoptotic proteins, interferons, hormones, clotting factors,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CpG-N motif; immunostimulation; antigen; CpG-S motif; immunisation; ODN; viral antigen; bacterial antigen; parasite; therapeutic; growth factor; toxin; tumour suppressor; cytokine; apoptotic protein; interferon; hormone; clotting factor; ligand; receptor; oligodeoxynucleotide; ss.

                                                                                                         ŏ
against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or curtomyxoviridae), bacterial antigens (e.g. toxoblasma, and/or curtomyxoviridae), bacterial antigens (e.g. toxoblasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a rh2 to a Th1 immune response and to activate immune cells.
                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunomodulatory oligonucleotide contg. unmethylated C-G dinucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAT16894-T16898 are immunomodulatory oligonucleotides contg. at leas one unmethylated C-G dinucleotide. The oligonucleotides can be used to activate B cells and natural killer cells. They can be used for treating, preventing or ameliorating an immune system deficiency,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              e.g. a tumour, cancer or a viral, fungal, bacterial or parasitic infection. They are also useful in stimulating a subject's response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunomodulatory oligo:nucleotide(s) contg. an un-methylated CpG d1-nucleotide - used for stimulating activity or when methylated
                                                                                                                       Note: the present sequence may have a phosphorothioate backbone.
                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 20;

This sequence represents an unmethylated CpG dinucleotide, and can be used in the method of the invention. The method is for treating a subject having, or at risk of having an acute decrement in air flow, comprising administering a nucleic acid sequence containing at least one can instead of a containing an unmethylated CpG. The nucleic acids containing an unmethylated CpG dinucleotide affect an immune response in a subject by activating natural killer cells (NK) or redirecting a subject by activating natural containing an unmethylated CpG to a Thl response by inducing monocytic and other cells to produce Thl course to a They can be used to treat pulmonary disorders having an immunologic component, such as asthma or environmentally induced airway disease. They can also be used to treat diseases associated with campositive bacterial infections or endotoxaemia including bacterial meningitis, neonatal sepsis, cystic fibrosis, inflammatory bowel disease and liver cirrhosis, Gram-negative pneumonia, Gram-negative abdominal abscess, haemorrhagic shock, disseminated intravascular coagulation, or

                                                                                                                                                                                                                                                     염
                                                                                                                                                                                                                                                                                                                  The present invention describes an improvement to a method requiring the administration of interferon alpha (IFN-alpha), involving administering an immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonocleotides with phosphorothicate backbones, palindromes, or G-rich sequences. The sequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is

                                                                                                                                           nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (pp-1tch) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, maemophilus, campylobacter, clostridium, Escherichia coll and/or staphylococus), fungal antigens and/or parastitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or
The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a "working draft' sequence. It currently consists of 71 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            To Chaeses 1 to 180856)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                              The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for US which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS in the database CDS which show significant similarity to other CDS which contains the contains the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptomyces coelicolor A3(2).

CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most
